Finite field + curve
fixed target + source domain
Exact binary norm chart
sources + r + kernel bit
Theorem 2
Exact affine compiler
native CDCL + XOR
Theorem 3
Implemented chart contracts do not imply original-system completeness.
SAT: replay literal norm
block full primary model
UNSAT: chart exhaustion
Budget / cap / UNKNOWN
lower bound only
exact counts unset
OPEN bridge: original S3 chain roots
auxiliary fibers + ghosts + exceptional branches
Separate component:
supplied-H root extraction
binary / odd fields
