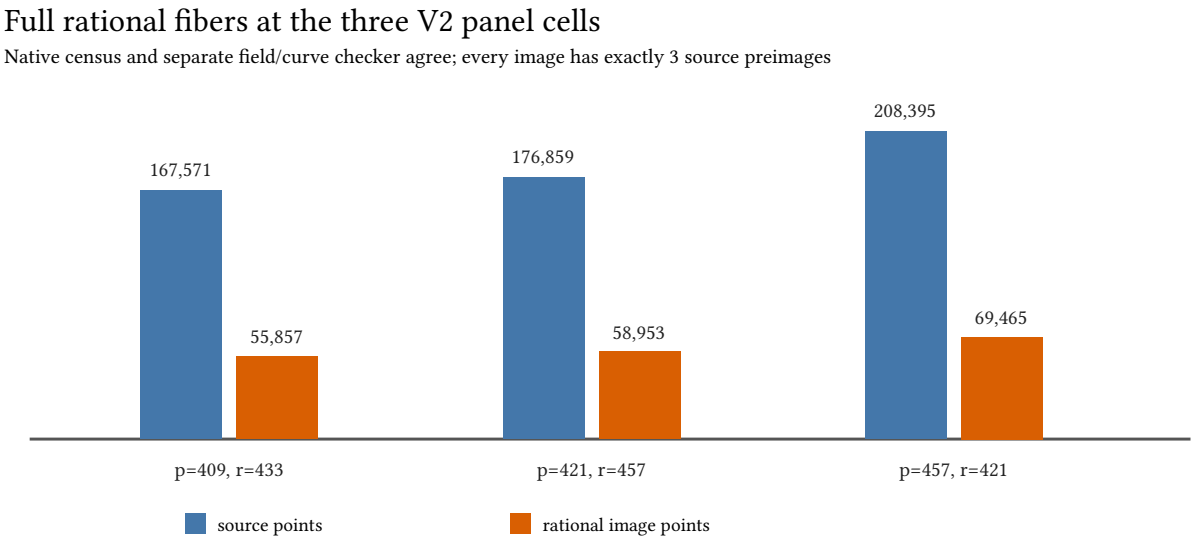
V2 three-cell full rational-fiber audit run

2026-10-15 23:35 UTC · Darwin arm64, shared L0. Three native point/map censuses and three independent Rust field/curve replays passed. All six processes exited zero with empty stderr; peak RSS stayed below 512 MiB.

p, r	source points	image points	r^2 map checks
409, 433	167,571	55,857	187,489
421, 457	176,859	58,953	208,849
457, 421	208,395	69,465	177,241


Every image has exactly three rational preimages. The identity fiber, generator and image orders, map digests, and all subgroup pair identities were checked by separate implementations. The exact source/binary hashes, commands, receipts and exit codes are linked from `REPORT.md`. This is a construction audit; the target DLP comparison has a separate frozen gate.
