N83 K992 layout control - results

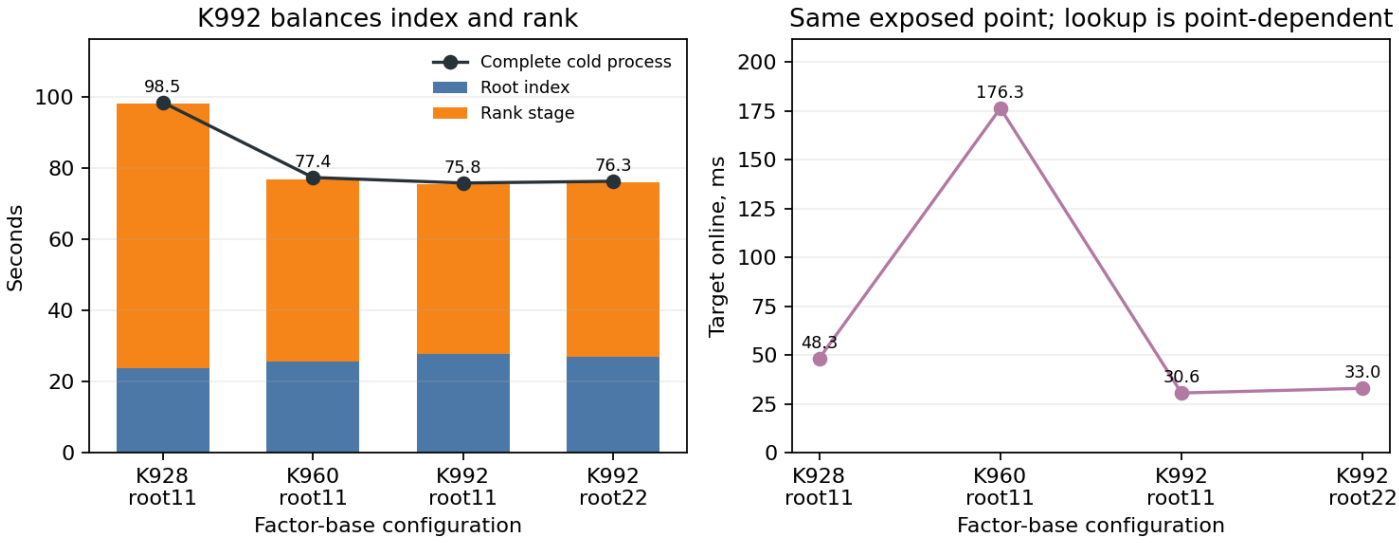

Complete cold process and one-target online lookup, same exposed point

Measured intervals

Base	Usable pts	Index s	Rank s	Cold s	Online ms
K928/root11	154,048	23.696	74.417	98.488	48.323
K960/root11	159,360	25.764	51.121	77.389	176.344
K992/root11	164,672	27.728	47.751	75.841	30.587
K992/root22	164,672	27.038	48.886	76.330	32.964

K992/root11: 75.841 s cold; root22: 76.330 s. The layouts are tied here.

K960 uses 680,614 target probes; K992 uses 117,653 on this point.

L0 shared-host controls; one previously exposed N83 point. All bases, relations and scalars independently replayed.

L0 local wall times vary: an earlier K992/root11 run took 95.223 s.

The sealed ten-point Tier 1 K992/K1024/K1107 panel is the fresh-point gate.

Every row passed independent base, relation, scalar and phase replay.
