Exact rootfinding component cycle

Date: 2026-10-17T02:43:00.214200+00:00

All registered workers finished in their declared component scope; check individual statuses below. No original-system completion, novelty or qualified8x result.

native-quintic-rational-repeated-support-20261017-v1: passed

Internal mixed-predicate geometric gain: 1.4172; A/A above10%: True. Unqualified descriptive comparison.

native-fixed-u-affine-cell-pruning-20261017-v1: passed

Fixed-U cell dimensions: GF2^83: 73 -> 8, GF2^163: 153 -> 8, GF2^233: 223 -> 8, GF2^283: 273 -> 8, GF2^409: 399 -> 8, GF2^571: 561 -> 8. Conditional synthetic affine space only.

native-quintic-quadratic-exceptional-support-20261017-v2: passed

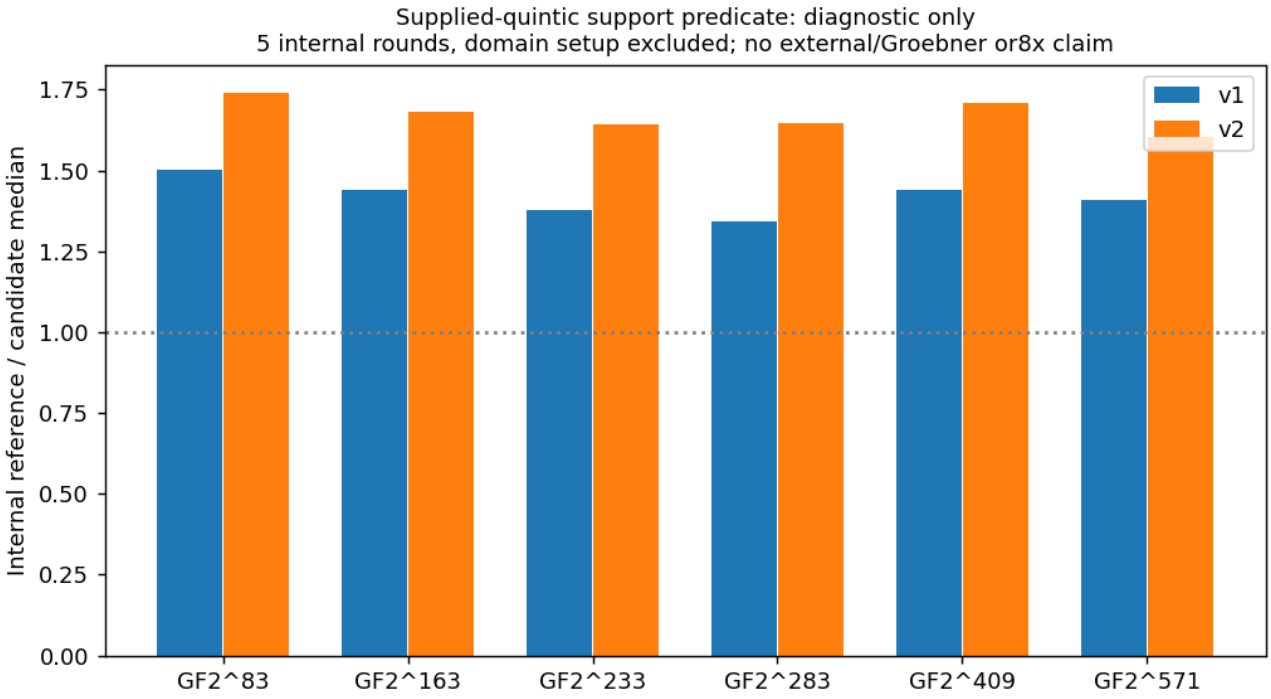
Internal mixed-predicate geometric gain: 1.6703; A/A above10%: True. Unqualified descriptive comparison.

Internal support timings exclude domain/field/input construction and are amortized batches; cold worker time includes all stages but has no paired cold reference. No qualified isolation or external-fastest comparison.

Six synthetic fixed-U affine cells leave dimension8. No claim that the actual norm family is reduced to2^8. See TRANSFER_REVIEW.md.

Next: actual-family U ranks, cold complete component costs and the separate odd prime interval adapter.

Reports/raw evidence remain local because automatic approval review rejected publication without explicit report-payload authorization. Source code is committed in PR2049.



Supplied-quintic support predicate: diagnostic only
5 internal rounds, domain setup excluded; no external/Groebner or8x claim
