Run report: pkm_isogeny_tower_ecbench_20261015, sessions p20–p28 and q20–q24

Descriptive record of the runs (observations only; interpretation is in the study README).

- **Started** 2026-10-15T07:58:18Z, finished 08:00:32Z (`progress.txt`); panel 3 (`run_panel3.sh`) after.
- **Binary**: `ecbench` built from commit `43986439e`, SHA-256 `074288d4a5b88b683f851d0a49900ea7b016a0f4c66651fb01cda16c748a13d3`.
- **Host**: Intel Xeon @ 2.10 GHz, 4 vCPU, virtual, shared with four other jobs; env class `ECBENV2ha95bed7071ef`. `ecbench run --cpus none --allow-busy`: every run L0. One thread, `nice -n 10`, 2.5 GB address-space cap.
- **Specs**: `specs/SPEC-{p20,p22,p24,p26,p28,q20,q22,q24}.json`; 8 one-target workloads per curve, 2 measured rounds + 1 warm-up, order alternate.
- **Arms**: rho-neg (reference), ic-iso-rootfind, ic-iso-mitm, ic-kummer-rootfind (p only), ic-plain, rho-neg-aa.
- **Runs**: requested 1,080 (720 measured); completed 1,080; verified 1,080; failures 0.
- **Audits** (`ecbench verify --replay-all`): 8 × `OK`, 720 replays reproduced, 0 problems (`audits/*.verify.log`).

Measured values (unit S = GAE / $\sqrt{r}$, 16 measured runs per arm) are in `tables/*.table.md` and `tables/summary-arms.tsv`; paired ratios with 95 % cluster-bootstrap intervals in `tables/*.compare.*.txt` and `sessions/*/comparisons/`. Every IC figure is a lower bound (unpriced native work). Wall times in the tables are L0 and not admitted here. Panel 3: 352 `ecbench fb` builds, 0 failed (`tables/panel3.tsv`).

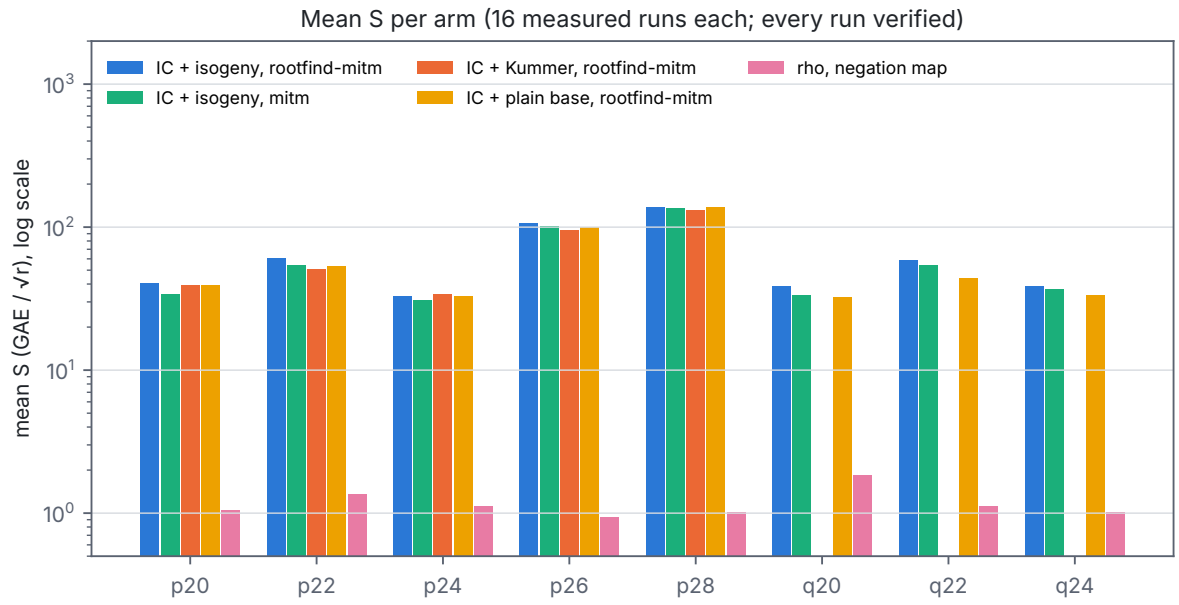

Figure 1: Mean S per arm and curve, recorded values (sessions above).
