Run report: k = 4 exponent ladder (ecbench), 2026-10-15T04:57Z

Descriptive. What ran, and what it recorded. Interpretation is in the study's `README.md` and `REPORT.pdf`.

- **Study:** `research/gaudry_quartic_d4_exponent_20261015`, protocol `PROTOCOL.md` (registered at `08722a2b7`; amendments 1–3). Code `0bea75038`; `ecbench` sha256 `8627cd29…0aa3`.
- **Specs:** `specs/SPEC-<job>.json`, one per (arm, p, target); generated by `make_specs.sh`. Queue: `jobs.txt` (amendment 1 order), run by `run_queue.sh`, `run_queue2.sh`, `run_queue3.sh`; log `sessions/queue.log`.
- **Host:** Claude Code cloud container, Intel Xeon @ 2.80 GHz, 4 vCPU at launch, 3 (CPUs 0–2) from about 16:30Z; rustc 1.97.0. Every session ran with `--allow-busy`: isolation earned L0 (229 records) or L1 (11). `S` is a count (`priced_by = counted`) and does not depend on wall time; wall time below is descriptive only.
- **Workloads:** `fp4_torsion(p, seed 1, max_cofactor 16)`, `p ∈ {29, 37, 53, 61, 101, 149, 197, 293, 401, 509, 701, 1009}`; target seed `2026101500000 + 10p + t` (IC specs, one target each), `2026101590000 + p` (rho-only, 16 targets); measurement seed `202610150`.
- **Arms:** `rho-neg` (`rho.negation`); `ic-d4-w` (`ic.pipeline`, `fghr-y-line:zero=1`, `gaudry-d4:macaulay=26,weighted=1,chains=1,sparsest=1,replay=1,charge_unsolved=1`, `linalg=wiedemann`); `ic-d4-lp2` and `ic-d4-lp1` (the same with `large_primes=2` and 1).

Runs requested and completed

72 jobs were planned. **59 ran and completed**; every record in them verified (`[d]G = Q`): 27 `ic-d4-w`, 9 `ic-d4-lp2`, 12 `ic-d4-lp1`, and 240 `rho-neg` records (219 distinct; the IC specs' paired rho runs repeat the same seed when two arms share a target). **13 did not start before the 16 h stop** (`sessions/NOT_RUN.txt`, `NOT_RUN3.txt`): `main-p{29,37,53,61,197}-t2` and `lp2-p{29,37,53,61,149,197,293}-t1`. 20 jobs failed at launch at about 16:28Z ("CPU n is outside this process's cpuset"; logs `sessions/*.launch-failed.log`, no computation) and were relaunched (amendment 3); 7 of them completed, 13 are the ones above. From 16:31Z to 20:34Z the relaunched jobs ran pinned to one CPU (wall only).

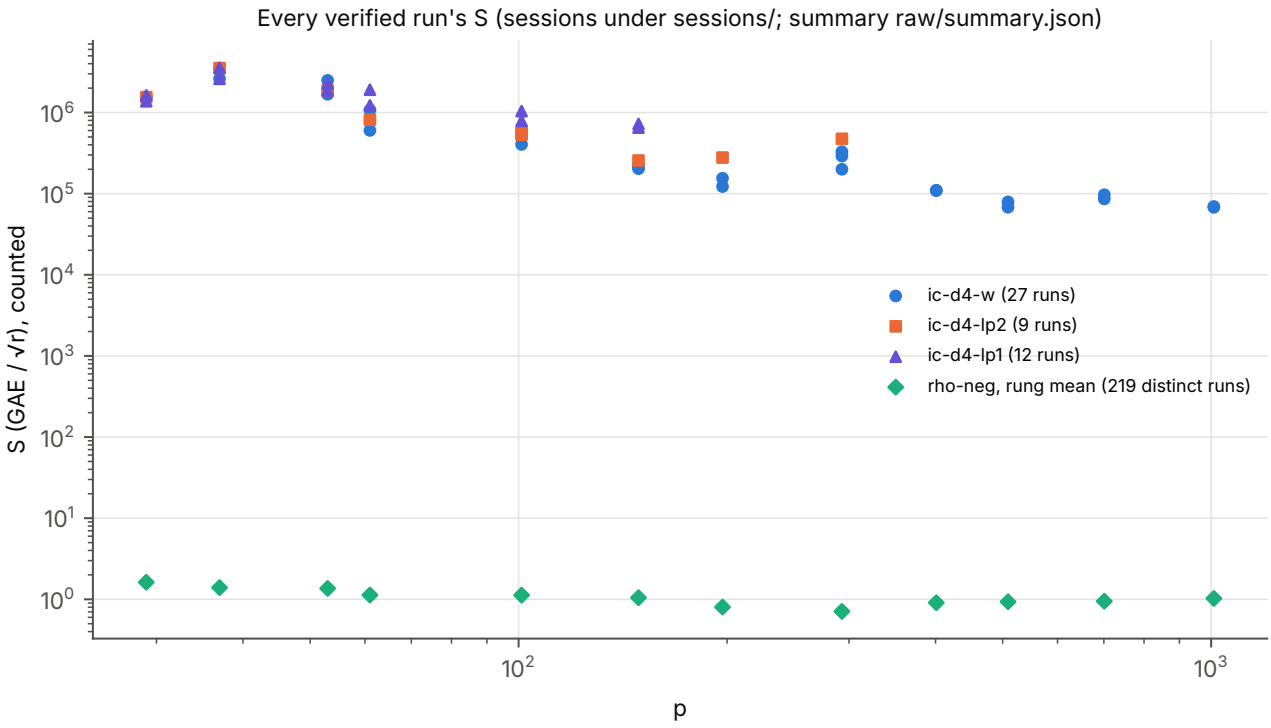

Figure 1: Every verified run's `S` by arm against `p` (48 IC runs; rho as rung means of the 219 distinct runs). Sessions under `sessions/`; summary `raw/summary.json`.

Index-calculus runs (measured; S in GAE/√r, trials counted)

Rho-only runs

16 per rung, all verified; per-run rows in `runs.tsv` (rows whose arm is `rho-neg` and job `rho-p…`). Rung means of `S` over all distinct rho runs: 1.62, 1.39, 1.36, 1.13, 1.13, 1.05, 0.80, 0.71, 0.91, 0.93, 0.95, 1.02 for `p = 29 … 1009` (18–19 runs a rung).

Raw records

`sessions/<job>/records.jsonl` (plan, host and session files beside them); audit receipts `audits/<job>.audit.json`, list `audits/AUDITS.txt`.
