Non-isomorphic pair V2: clean direct execution

2026-10-13 17:44 UTC · shared Darwin arm64 · L0 · 24/24 verified arm rows

The same eight public source targets were solved by source relations, degree-three destination relations and matched source negation rho. Both direct executions returned zero, and their raw TSV and stderr logs compare byte for byte. The independent Rust checker verified all recovered scalars, the non-isomorphic map, its rational three-point kernel and eight target fibers. Exact commands, hashes and input rules are in `README.md`.

Across eight targets, rho used 664, source relations 3,312, and destination relations 3,794 counted group operations. Destination/source = 1.145531 in this unit. The map field work, roots, table probes, row work and memory are recorded separately and lack a pinned conversion into the graph's unit.
