Two explicit transports reach each same destination model

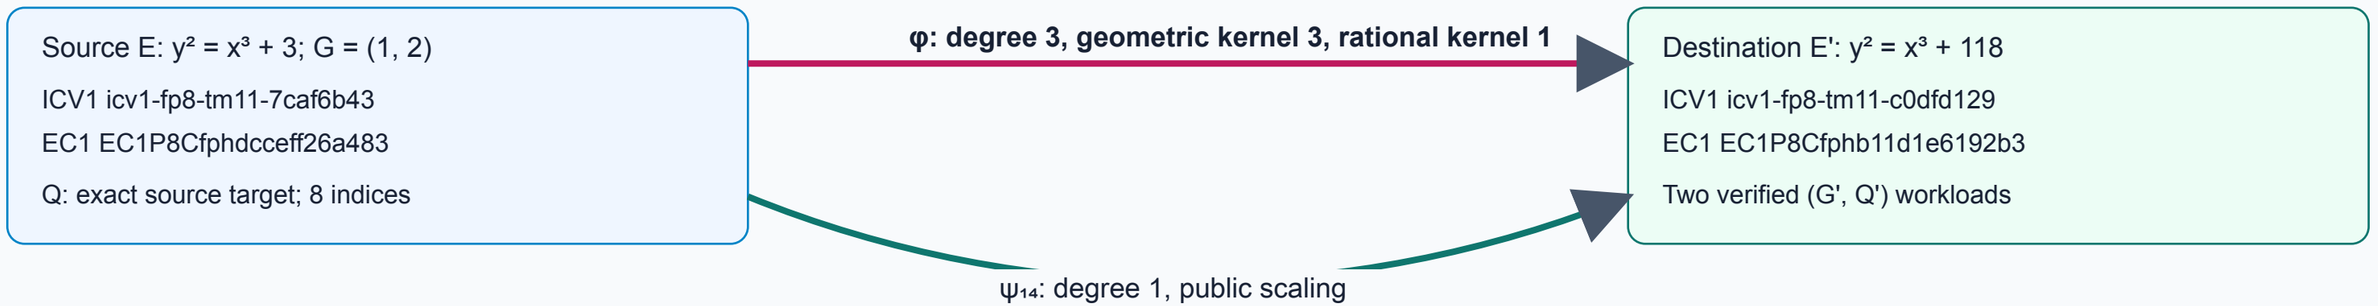

v3: 8 frozen source targets per pair; relation collection, recovery, and original-source scalar checks verified in both destination arms.

F13 · subgroup order 19 · factor base 4

Checked pointwise on rational E: φ = ψ₂ ∘ [10 mod 19]. Both destination relation arms verified 8/8 answers.

F199 · subgroup order 211 · factor base 12

Checked pointwise on rational E: φ = ψ₁₄ ∘ [29 mod 211]. Both destination relation arms verified 8/8 answers.

Source: raw-v3.tsv, independent_v3.log, and frozen v4 map/isomorphism checks. Diagram shows named models, not an asymptotic transfer claim.
