q06-many-summand: native ecbench run

Session ECBS1h75bd75f60dbe

Source c716e462934128c75e99dd458748e08623a2708c

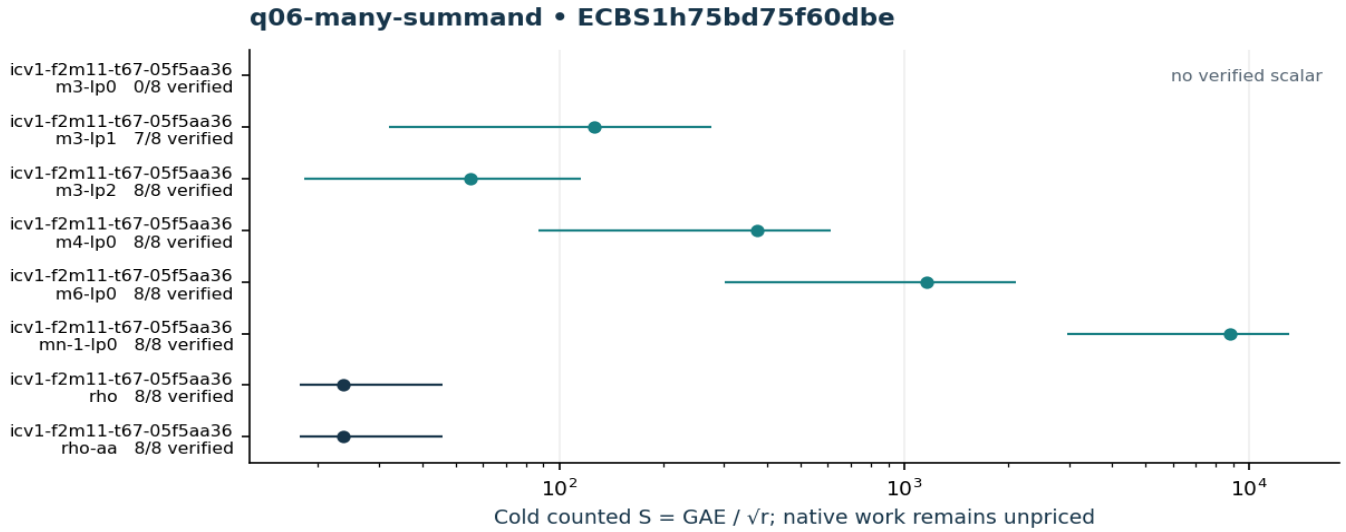

Binary cc5bba39d33465ddc1b1d31af8ac25c6680d41193fc76012d9a1019b6046f02d

Host ECBENV2h687984d4e73d; earned L0. Public points, no planted scalar, paired rho/A/A, seed 20261014, cold setup repeated. Wall clocks are inadmissible.

64 attempts; 55 verified recoveries; 55 exact standard replays.

Exhausted outcomes and the N83 error were replayed separately. Successful-only means/ranges do not include failed work; failed attempts retain their counters and resource vectors. Ratios are missing on censored curve/arm cells.

Graph: points are recorded mean S; lines are observed min/max over verified recoveries, not confidence intervals. Sample counts appear beside every arm. A quotient of partial counts does not bound full cost. This is no speedup or scaling claim.

Raw records: research/ecbench_open_questions_20261014/sessions/q06-many-summand/records.jsonl

Receipts: q06-many-summand.audit.json; failed-replays-v2.json; resource vector q06-many-summand.resources.json.
