K984, K1000 and K1016 cold process and target-online intervals

Measured intervals

Base	Usable pts	Index s	Rank s	Cold s	Online ms
K984/root11	163,344	46.775	101.329	148.974	364.063
K1000/root11	166,000	36.006	78.951	115.501	114.163
K1016/root11	168,656	36.007	57.710	94.452	285.381

K1016 is shortest here at 94.452 s; K992 earlier was 75.841 s.

The K992 reference is from a different local interval, not a paired estimate.

L0 shared-host diagnostics; one previously exposed N83 point. Every base, relation and scalar independently replayed.

All three controls passed independent base, relation, scalar and phase replay.

L0 exposed-point data is diagnostic; the ten-point Tier 1 panel is the selection gate.
